WHOLE CAPABILITIES. ONE GOVERNED PLATFORM.

From conversations to grounded healthcare resolutions.

Compass connects Member, CSR, and Provider experiences to reusable healthcare capabilities—one complete product increment at a time.

CSR Chat becomes a Compass surface.

The experience remains purpose-built while context, knowledge, actions, and outcomes move through the shared platform contract.

CONVERGE ONCE · EXPAND BY CAPABILITY

SURFACES
Member · CSR · Provider
Persona, presentation, policy, and channel experience

→

SPINE
Auth → Broker → AI Agents
Identity, context, routing, state, safety, actions, and telemetry

→

BRAIN
Governed knowledge
Trusted data with provenance, freshness, and policy controls

01 · STRATEGIC MOVEMENT

Converge once. Expand by capability.

Move from surface-specific conversational delivery to a shared capability model—without turning the roadmap into a migration chain.

FROM · CURRENT STATE

Experience-led work with fragmented platform seams

Benefits Inquiry is the reference flow. CSR Chat is in flight across surface, runtime, data, and workflow boundaries.

→

TO · TARGET STATE

One governed platform with reusable capability units

Every surface reaches versioned contracts for identity, routing, knowledge, response, action, and outcomes.

- **Benefits Inquiry establishes the reference foundation; every milestone adds value and platform strength.**

NORTH-STAR OUTCOME

≥95%

Grounded Resolution Rate

Eligible inquiries correctly resolved with trusted evidence, appropriate context, and a usable answer.

≥99%
SAFE HANDLING RATE

100%
TURNS WITH TYPED OUTCOME

02 · DELIVERY CONTRACT

Every milestone ships whole.

A capability is complete only when experience, intelligence, trust controls, and operations can stand on their own.

01 · PRODUCT

Defined experience

- Scope, taxonomy, and journeys
- Surface and persona behavior
- Structured answer by default
- Configurable response variants

02 · TRUST

Authorized context

- Actor, subject, tenant, consent
- Governed Brain tools + freshness
- Provenance and safe boundaries
- Clarify, abstain, or escalate

03 · INTELLIGENCE

Brokered capability

- Explicit and inferred routing
- One primary capability per turn
- Agent retrieval through policy
- Optional prefetch + suggestions

04 · OPERATIONS

Measurable control

- Typed outcomes + telemetry
- Evaluation, GRR, Safe Handling
- Cohorts, SLOs, and runbook
- Rollback by capability version

ACTIONS Surface-initiated by default; agent-recommended when configured. **EXECUTION** Broker authorizes, confirms, executes, audits. **OUTCOMES** Resolve · clarify · abstain · act · escalate.

03 · DEFAULT MILESTONE ORDER

Six complete capability increments.

The baseline sequence compounds learning—from grounded answers and contextual authorization to high-assurance transactions.

Baseline sequence: value first, then progressively richer context and action assurance. Capability units may move as a whole.

1 Eligibility — INDEPENDENT RELEASE UNIT

Resolve coverage status, dates, plan context, and restrictions for the right person at the right point in time.

HARDENS actor vs. subject auth · provider access · point-in-time context

2 Claims — INDEPENDENT RELEASE UNIT

Explain status, adjudication, member responsibility, denial context, and next steps across multiple records.

HARDENS PHI minimization · record clarification · explainable codes

3 Accumulators — INDEPENDENT RELEASE UNIT

Ground deductible and out-of-pocket balances by individual or family, network, benefit period, and authoritative as-of date.

HARDENS financial precision · effective periods · reconciliation

4 Formulary — INDEPENDENT RELEASE UNIT

Clarify drug coverage, tier, prior authorization, step therapy, and quantity limits within explicit clinical boundaries.

HARDENS entity normalization · policy versions · clinical boundaries

5 Provider Lookup — INDEPENDENT RELEASE UNIT

Find and rank providers using specialty, location, network, accessibility, and fresh directory context.

HARDENS search + ranking · freshness · stable ProviderReference

6 Provider Scheduling — INDEPENDENT RELEASE UNIT

Find availability and safely book, reschedule, or cancel with explicit confirmation and transparent action status.

HARDENS idempotency · audit + compensation · concurrency

04 · RELEASE DISCIPLINE

Quality is shared. Release is independent.

Common exit gates

BEFORE COHORT RELEASE

≥100
representative evaluation scenarios per capability

100%
successful answers carry provenance + freshness

Zero
cross-tenant access or critical unsupported factual claims

100% action assurance
Every side effect is authorized, idempotent, confirmed, and audited; capability SLOs approved before release.

Sequence can change. Product integrity cannot.

- ✓ **Platform contracts—not prior capabilities.** Claims need not require Eligibility.
- ✓ **Optional composition; graceful degradation.** Missing capabilities stay safe and transparent.
- ✓ **Own rollout, telemetry, and rollback.** Enable by tenant, surface, and version.
- ✓ **Portable references preserve independence.** Scheduling accepts approved ProviderReference.
